About Me

Computer Science undergraduate student nearing graduation, currently developing my thesis with an estimated completion date of August 2027. I have experience in web application development and multidisciplinary technology projects, working with technologies such as React, Express, Spring Boot, PostgreSQL, Astro, and TailwindCSS. I participated in web application development competitions and collaborated as a research intern on projects related to generative artificial intelligence and education, where I worked on configuring custom GPTs and Gemini Gems, as well as curating and processing documents through OCR, metadata structuring, and information indexing. I am seeking opportunities that allow me to gain professional experience while completing my studies.

Skills

Languages: Python, JavaScript, Java, SQL

Backend: Spring Boot, PostgreSQL

Frontend: React, Astro, Tailwind CSS

Tools: Git/GitHub, Google Workspace

Experience

Research Intern — DGAPA UNAM

January 2025 — January 2026

Curated documents for integration into custom GPTs and Gemini Gems. Using Marker and PDF Sandwich, I applied OCR to convert books and articles into Markdown format, and also generated automatic YouTube video transcriptions with yt-dlp and Whisper.

Marketing Lead — SIAFI-UNAM

September 2023 — July 2025

Coordinated the marketing team for the production and publication of social media content. Implemented collaborative processes, asset standardization, and a ticketing system using Canva, Notion, and Google Workspace.

Projects

IDK FCA Auditorios

github.com/pablo-rojas-dev/idk-fca-auditorios

React | Spring Boot | PostgreSQL | Tailwind CSS | shadcn/ui

Web application developed to centralize and improve logistics management for academic events at my faculty.

Aquasense<https://github.com/pablo-rojas-dev/aquasense>

React | Express JS | C & ESP32 | ShadCDN | Tailwind CSS

Web dashboard for visualizing data from multiple humidity and temperature sensors deployed in the field.

Inventario Mix Up<https://github.com/pablo-rojas-dev/inventario-mix-up>

SQL92 | Draw.io | Google Sheets

Documentation and database design for tracking products of a music retail company. Includes problem definition, requirements analysis, conceptual model, logical model, normalization, and data dictionary.

Achievements

1st Place – Innovation in Water Apps2026

Mexican Hydraulic Association

3rd Place – National Computer Science Marathon2023

National Association of Schools and Faculties of Accounting and Administration

Education & Certifications
